

PRMS ARCHITECTURE LAB

Institutional Definition

Version 1.0 | 2026

Purpose

PRMS Architecture Lab is an independent research unit dedicated to the development, validation, and dissemination of measurable architectural systems. The Lab develops and maintains the PRMS framework and advances research at the intersection of architecture, environmental systems, performance measurement, data, and technology.

Institutional Identity

Official name: PRMS Architecture Lab

Type: Independent Research Unit

Established: 2024

Research activity: active since 2021

Location: Querétaro, México

Research framework: PRMS — Performance Regulated Metabolic System

Founder & Research Director: Oscar A. Hernández García

ORCID: 0009-0005-2474-4834

Institution ID: PRMS-ARL-001

Research Scope

The Lab investigates measurable architectural systems and their application in the built environment. Primary research areas are Energy and Environmental Regulation Systems; Metabolic Architecture; Performance Measurement; Data-Driven Systems; Applied Prototyping; and Urban Metabolism and Distributed Urban Systems.

Research Structure

PRMS Research — theoretical development, conceptual frameworks, research methods, and scientific publications.

PRMS Systems — applied research, prototyping, system implementation, measurement, and performance validation.

Renewable Horizons — editorial and research production focused on renewable energy systems, distributed infrastructures, and the conceptual development of metabolic architecture.

Research and Application Ecosystem

PRMS establishes the governing framework. PRMS Architecture Lab develops and validates the research. PEAR-ROI operationalizes the system in built environments. The App and data infrastructure support measurement and feedback. SmartLiving Milenio III serves as an applied validation environment.

Research Outputs and Infrastructure

The Lab produces peer-reviewed articles, working papers, preprints, books, research documents, measurable performance records, and experimental knowledge. Research infrastructure includes the institutional website,

digital repositories, DOI/Zenodo records, ORCID-linked research records, GitHub-based technical infrastructure, and emerging PRMS AI research infrastructure.

Institutional Identification

Public research outputs should use the institutional affiliation: PRMS Architecture Lab, Querétaro, México.

Persistent research records are maintained through DOI/Zenodo infrastructure. The researcher profile is linked through ORCID and ResearchGate.

ROR — Research Organization Registry: registration process in progress. ROR ID: To be assigned.

Institutional Status

PRMS Architecture Lab is an active independent research unit undergoing progressive institutional development. This document defines the institutional identity and operating scope of the Lab. It does not itself confer legal status, accreditation, certification, or a ROR identifier.
